

You look down at your hard cock and you think to yourself am I really going to do this? You gulp trying to settle your nerves. It's just going to be a bit of fun, nothing bad is going to happen, it'll be fine. You think to reassure yourself. Before picking up the end of the hose and sliding the tip into your cum slot. You grunt as it feels a little uncomfortable in there, but once you're sure the hose is not going to come out you pick up the bike pump.

Slowly you pull up the handle listening to the air filling the chamber below. "Here goes," you mutter before pushing down on the handle. As the air rushes into your cock, you can't help but moan loudly. Looking down between your legs you can see your cock and balls inflating bigger. "Oh shit, it actually worked!" You shout happily before you start to work the pump up and down as fast as your arms will let you.

You gasp and moan with every pump. Inches are added to your cock over and over and quickly your cock is as long and as thick as your forearm. Your nuts are the size of basketballs. You can feel yourself getting to the point of orgasm, so you start to work your arms harder than ever. "Yes! Yes! Bigger! Bigger! Bigger! Bigger!" You shout as your cock and balls continue to inflate fuller and fuller with air.

As you reach orgasm your entire body locks up. Huge bulges start to flow down your shaft only when they reach the tip of your cock nothing comes out. The pressure and pleasure inside of your cock builds and builds causing you more and more pleasure. It's like you're stuck at the point of orgasm. The pleasure grows so intense your whole body starts to shake. Finally unable to push out from the tip of your cock all of that cum and air trying to escape slides back down your shaft and into your balls again.

You groan with pleasure as your balls swell out, doubling in size reaching the size of beach balls. The sensation of all of that cum and air sliding back into your nuts puts you through so much pleasure you can't help but cum again. Like before cum and air push their way down your inflated tight shaft. Looking at the tip this time you can see what's happening. Your cock is so inflated it's pinched tightly around the hose you had pushed into it.

There's no way you can cum unless you release the pressure and right now your cock is too inflated for that to ever happen. As your second even more powerful orgasm hits you can't help but flop back onto your bed. You bellow with pleasure as all of that load and air tries to push its way out again only to have to slide back down into your balls.

You're not even finished cumming and you can already tell you're going to cum again. Grabbing the bike pump, you start to work it faster and faster and faster. Your whole body is shaking with pleasure, but you don't stop! You keep pumping up your cock bigger and bigger and bigger and bigger and bigger! It's fatter and longer than your leg now and each of your balls are bigger than you!

It's still not enough though! You need more! You want more! You're still not horny enough! You keep pumping and pumping and pumping and pumping and pumping and pumping! Your cock balloons, fatter and longer than a fridge! You cum once again and your balls try their best to release their load but are once again forced to swallow it back down. You scream with pleasure as your nuts surge out, growing bigger than the bed you're lying on.

You keep pumping and pumping away like a man possessed! Your balls start to rub against the walls and ceiling and your cock is buried between your two rapidly ballooning nuts. Yeah, head cranes back as you cum again. You can feel the veins pulsing in your neck as you keep cumming harder and harder and

harder! As all of the cum and gas pushes back into your overinflated balls they smash through the ceiling and walls.

You take this as a sign you're not meant to stop! You keep working the bike pump adding more and more air to your cock and balls. Your now car-sized cock is still nothing compared to your rapidly swelling balls. They keep stretching exponentially bigger and bigger and bigger! Rolling over house after house your balls inflate hundreds of feet bigger and fuller.

As your balls keep inflating more and more you just keep growing hornier and hornier! Your arms keep working the bike pump faster and faster and faster! Your cock balloons ten times bigger than a bus and still, your arms will not let up. You think to yourself maybe you should take a break and try to release the bike pump, but your hands won't let go and your arms won't stop moving.

Your body is so addicted to the pleasure of growing and inflating bigger it won't listen to your brain anymore. You keep pumping harder and harder and harder! Your cock just keeps swelling and swelling pushing out bigger and fatter with air. The realization that you cannot stop anymore actually just makes you even hornier.

You decide that if you can't stop then you just want to keep going harder. You start to force your arms to move even faster, and it works. So, you focus on that you keep focusing on pumping your cock and balls bigger! As your arms keep working the pump harder your cock and balls keep swelling faster and faster and faster and faster and faster! Your balls balloon bigger than the city, your cock is not fatter and taller than the tallest skyscraper!

You keep cumming harder and harder and harder but still, none of it can get out! Your balls keep backing up more and more in moments your nuts are bigger than the country! You can only cry out and moan with pleasure begging for more as your balls swell again this time eclipsing the planet!

You keep shouting out for more and more and more as your arms refuse to stop working the pump faster and harder for you. As your cock pushes out among the planets and your balls start to make the solar system look small you decide that you are never! Ever! Going to stop! Even if you outgrow the entire universe, you're just going to keep pumping your cock and balls bigger and bigger and bigger so you can keep cumming harder and harder and harder! Until the end of time!

The end.
