

Sarah was feeling bored one day as she had just completed a project and had nothing else lined up for cash. She was browsing the web for posts and listing for different freelancing work so that she can have some extra cash on hand for supplies and tools for her ever growing magic collection. As she was scrolling past, she then stumbled upon an ad for a research subject studying the effects on body inflation magic and science.

//Test subjects wanted for testing new body inflation magic. Paying \$500 on arrival and completion of 1st test. \$2000 for completion of entire testing course//

“Hmm.” Sarah thought to herself. “Well that looks interesting. And \$2k for the day. I think I can make that work.”

Sarah sent in her application and was sent back an acceptance email saying where and when the testing was starting. She packed up a few things and said to Emily that she was going out for a bit and won't be home till later, also asking her to possibly pick her up when she called. Emily nodded and agreed and Sarah walked out and out to the site.

On the bus, Sarah was looking over the articles that this team of people have posted and seeing all the advancements they have done, everything from clothing that can change shape, to tools and magic infused devices that stimulate growth and size. She then found reviews of past test subjects that have done work for them and many have had great results and great reviews, from the testing being easy and quick having great results on their bodies, to the staff and the researchers being kind and truly loving their work. She continued scrolling through social media, seeing all the people trying out new body inflation and just wondering how much someone could take.

Soon enough, the bus stopped at Sarah's stop and she stepped off and soon in front of her was a massive tech complex. Large and wide buildings with tons of windows and cars parked at the company lot, and people lining up near one of the entrances. Sarah made her way over and soon noticed why people were lined up and gathered.

//Welcome participants to BodyMorph Industries. Research subjects for today's experiments please start here//

Sarah smiled and felt a soothing comfort about the whole place. People looked over at Sarah and greeted her.

“Hey there,” one of them said. “Haven't seen you here before. First time?”

“Yeah.” Sarah said a bit sheepish, her anxiety not helping. “Saw an ad and figured I could use some extra cash.”

“Well your in good hands.” Another person said. “These people here are the best around and you'll have lots of fun.”

“Hehe,” Sarah said softly. “Yeah just more of a curiosity than anything.”

Soon a voice came from the inside of the lobby telling everyone to enter the building. Sarah and the rest walked inside to a beautiful lobby filled with scientific articles, plenty of amenities, and a feeling of safety and security. Sarah smiled and opened up more mentally and was becoming more excited and her curiosity was starting to flourish. Eventually, as all the participants entered the main lobby they were soon greeted by the head scientist running the experiments for the day. The head researcher was a tall woman of roughly 6 feet tall but what caught Sarah's attention was that she had a massive chest, even making Sarah blush a bit. Her chest had to be roughly almost as big as she was, and was still standing tall and doing all the things she did.

"All right everyone," The researcher started to say. "I am Dr. Kalya Dawson, and I am the head researcher for the set of experiments. And I would like to thank all of you for participating in this."

The group clapped and gave their own remarks. Sarah would kinda sulk in the back, still feeling a bit nervous but more so a bit curious about all of this.

"Now then," Dr. Dawson said. "If you would please follow me to the changing rooms and we can get started."

The people followed Dr. Dawson and Sarah kind of staggering behind and looking at all the pictures of her and the research that they have done. It seemed like they were walking for hours down long hallways with lab rooms filled with people doing experiments. Some were working on clothing, others testing samples of materials strength. Dr. Dawson saw that Sarah was lagging behind the rest of the group and told her assistance and went over to her.

"I see you're interested in what is happening here." Dr. Dawson said to Sarah.

Sarah was shocked to see her so close to her, her chest right up against her face. "Uh yeah. Just never seen so much science but into such a topic. I mean I've done some stuff on my own but never thought that there was this much."

"Well yes," Dr. Dawson said. "There is so much to be learned and explored. I've even done tests like what you're about to experience because I was curious about how it all works."

This notion spoken to Sarah lifted her spirits up and she smiled. "Well i mean i am here to get some spare money but seeing all of this. Maybe if it all goes well, i might apply here."

Dr. Dawson smiled at Sarah. "Well before that you have to make it through today. If you make it out of here all right maybe we'll talk later."

Sarah nodded and then the two of them split off, Dr. Dawson going to the research chamber and Sarah going towards the group heading into the changing area. Sarah entered the area and saw all the other participants changing into special suits. One of the researchers came up to Sarah and asked for her size. Nodding and walking over to grab a suit that would fit her and told Sarah to put it on and ask them if anything needed to be changed. Sarah went over to a more private corner and stripped down to her underwear and slip bra. The suit given to her was a white and silver color and felt like latex in her hands. She had many questions on why a suit like this was needed but didn't question it as she slipped it on. As she was zipping it up and it felt

very tight and snug in her, her breasts and ass were more prominent in the suit than her normal leggings but she felt very comforting in it. The researchers, seeing that everyone was ready, were telling everyone to please follow them to the main testing area to be given what the first experiment was.

The testing area was filled with scientists, researchers, and tables where various tools and chemicals were laid out. All the participants were told by Dr. Dawson to please step up to the table and to drink the liquid that was in the vial and explain how they felt. One by one they drank the vials and gave some vague responses and strange feelings, even a few of them started to notice that they grew and shrunk in size. The scientists go over the results and type them into their tablets. Sarah, being one of the last participants, looked at the vial and gave it a swig.

“Mmh,” Sarah remarked. “mmm...Tastes like watermelon lemonade. Really good”

“Anything else?” one of the researchers asked.

“Well I mean...” Sarah started to say when all of the sudden her chest started to feel heavy.

“Mmm...what's happening now.”

The researcher looked at Sarah's chest and noticed that it began to grow slightly and poked a pen at her breasts, noting that it was firm but bouncy. Sarah made an “eep!” noise as the researcher was seeing how the effects were taking place. She then took a step back as her chest was feeling more and more heavy and soon her latex suit was beginning to stretch out. Her chest was definitely growing more and the suit was feeling more tight and snug on her. Grabbing at her chest, Sarah was feeling very surprised and also amazed that those fluids would do that. She was then told to try more and she nodded and grabbed another vial and swigged it down.

“Now how does that taste and feel?” the researcher asked.

“Well...” Sarah began to say.

Then all of the sudden she felt a swelling sensation coming from her ass and she quickly looked at it and her ass was blowing up like a balloon. She was startled and felt the suit keep growing tighter and stretching more and more. Sarah was very surprised but feeling good about how this was all going. She firmly grasped her ass and chest and gave it a good squeeze, causing her to feel pleasure and joy. The researchers were completing the first round of tests and received some data from the suits and asked whether or not people wanted to continue on to the next set of tests. Some of the participants said that they were all right and left with the cash that was promised. But Sarah, she was very excited and really wanted to prove to Dr. Dawson that she could handle whatever inflation was tested on her and followed the others to another chamber.

As they were walking over, Sarah noticed that her body was still growing more and more, slowly but still growing. The suit was able to keep her figure together, but the signs of tearing were present. She decided to not say anything and just kept on walking. Soon the group arrived at a much, much larger testing lab, where in the center of the lab was a massive machine that was

like something out of a 1950s b-movie sci fi plot. Dr. Dawson explained to the remaining participants that this device was meant to stimulate a person's natural abilities to grow. Sarah was getting very excited, and still swelling, she decided to be the first one to try out the machine and feel the effects. She walked up to the device, sat down on the chair and the massive beam was face to face with her and she tensed up a bit.

//Starting pulse in 3...2...1... Pulse//

Sarah felt a wave of heat and light pour on her body as the device was activated. Her body was stimulated more and more the longer the light was on her and soon after 30 seconds, the beam was turned off and she was told to please step to the side.

“So...” Dr. Dawson said. “The beam we fired at you should have made you feel something.”

“I mean, I feel great.” Sarah said. “I mean my suit is getting a bit tight but...”

“Tight?” Dr. Dawson said, puzzled. “Like right now?”

“Yeah I mean my tits and ass kept growing and...” Sarah said then suddenly felt very lightheaded and dizzy. “Ugh....what's happening....”

Dr. Dawson took a look at Sarah's suit data and noticed that not only her growth was still happening but in fact the suit was barely holding her together as Sarah began to grow. Dr. Dawson told everyone to head back but soon Sarah fell on her ass and felt her body suddenly grow. The suit was stretching out and tears formed exposing her skin underneath. Sarah's breasts were soon as big as she was and her ass was swelling up like balloons to the point where the suit gave up and her ass slammed on the ground with a thunderous sound. Sarah came back and noticed that she was getting bigger and taller, she tried to get out of the suit but soon her own breasts made that happen. Loud tearing sounds and cracks exploded throughout the lab and soon Sarah was over 10 feet tall and her breasts were twice that.

GROANNNNNN.....

Dr. Dawson was very surprised and amazed that someone had that much potential in them as she soon stood in the shadow of a giant Sarah. She tried to get as far as possible but Sarah's swelling form was growing too fast. Soon Sarah was pressing against the ceiling and walls of the lab trying her best to slow her growth in any way. She was panicking and scared that she might break more stuff. Her breasts were very heavy and pushed everything and everyone against the walls. She moaned out as her skin was becoming sensitive to each push and press that were applied to her body and soon enough her breasts couldn't handle the pressure and began to lactate.

SQUIRT SQUIRT

The room was becoming more small as Sarah could barely hold on anymore as she felt the ceiling giving way and bursting up and out the facility. She was soon towering over the entire complex as her breasts came thundering down and flooding out the complex with her milk.

Sarah looked very dazed and saw stars as soon enough her body stopped growing. Dr. Dawson looking up upon Sarah's massive size made notes to make sure that to reinforce the complex for the more massive growth spurts.
